

BIPARTISAN INFRASTRUCTURE BILL

NEARLY \$6 BILLION FOR WEST VIRGINIA

This bipartisan bill will help West Virginia by addressing the needs of our state while creating good-paying jobs and growing the economy over the next decade. West Virginia has 1,545 bridges and more than 3,200 miles of highway in poor condition, and 32 percent of trains and other transit vehicles in the state are past useful life. At least 258,000 West Virginians have no broadband access. This kind of investment hasn't been made in three decades. I have always said that the best politics is good government, and I'm incredibly proud to deliver on this major investment for America.

Roughly \$3 BILLION to repair roads and highways and nearly \$200 MILLION for Corridor H

Around \$500 MILLION for bridges

Around \$40 MILLION for airports

Over \$300 MILLION for public transit

Around \$600 MILLION to expand broadband access

Over \$475 MILLION for water and sewer investments

Around \$100-\$200 MILLION to cap orphaned oil and gas wells

At least \$700 MILLION for abandoned Mine Lands funding

There will be additional funding to reinvigorate coal communities, including a new program to build clean energy on current and former mine lands and grants for manufacturers to build or retrofit facilities to produce or recycle energy products in communities that have seen coal mines or plants close.

**The amounts above are estimates.*
